

### 1.9.4 Rubric: Technical Assessment

	Needs Improvement	Fair	Good	Excellent
Structural Design	<ul style="list-style-type: none"> <li>- Team has difficulty assembling robot during demo</li> <li>- Team has difficulty keeping robot together during competition</li> <li>- Parts are used inefficiently</li> </ul>	<ul style="list-style-type: none"> <li>- Base structure has some stability</li> <li>- Modules/extremities are difficult to apply</li> <li>- Modules/extremities difficult to maintain</li> <li>- Robot unstable during motion</li> <li>- Difficulty with environmental variations</li> </ul>	<ul style="list-style-type: none"> <li>- Base and modules stable</li> <li>- Robot has some difficulty with variations</li> <li>- Robot is heavier than required</li> </ul>	<ul style="list-style-type: none"> <li>- Robot is modular and parts are used efficiently</li> <li>- Base and components very stable</li> <li>- Robot handles environmental variations very well</li> <li>- Robot displays a wide range of capabilities</li> </ul>
Locomotion	<ul style="list-style-type: none"> <li>- Robot has difficulty moving at all</li> <li>- Robot motion is jerky</li> <li>- Robot motion is inappropriate for tasks (too fast, for example)</li> </ul>	<ul style="list-style-type: none"> <li>- Robot motion is appropriate</li> <li>- Robot motion is not repeatable</li> <li>- Robot motion is not precise</li> </ul>	<ul style="list-style-type: none"> <li>- Robot motion is very appropriate</li> <li>- Robot motion is repeatable</li> <li>- Robot has minor difficulties with precision</li> </ul>	<ul style="list-style-type: none"> <li>- Robot drive train is extremely solid</li> <li>- All motions are appropriate for the tasks they do</li> <li>- Robot is very controllable</li> <li>- Robot actions are easily repeated</li> </ul>
Manipulation	<ul style="list-style-type: none"> <li>- Robot has one or no manipulators (attachments)</li> <li>- If there is one, it has extreme difficulty completing tasks</li> </ul>	<ul style="list-style-type: none"> <li>- Robot has 2 or more manipulators</li> <li>- Manipulators are not precise</li> <li>- Manipulator success is not repeatable</li> </ul>	<ul style="list-style-type: none"> <li>- Many robot manipulators are capable</li> <li>- Some manipulators are unreliable</li> <li>- Some manipulators are overly complex</li> </ul>	<ul style="list-style-type: none"> <li>- Robot has 1 or more manipulators</li> <li>- Manipulators perform tasks extremely well</li> <li>- Manipulators are robust</li> <li>- Manipulators are simple</li> <li>- Manipulators are reliable</li> <li>- Team can install manipulators with ease</li> </ul>
Navigation	<ul style="list-style-type: none"> <li>- Robot has difficulty navigating the playing field</li> <li>- No sensors used</li> <li>- Robot can perform some navigation using timed turns</li> </ul>	<ul style="list-style-type: none"> <li>- Robot uses one sensor for limited navigation of the field</li> </ul>	<ul style="list-style-type: none"> <li>- Robot uses multiple sensors for navigation</li> <li>- Robot has limited difficulty reaching extended tasks</li> </ul>	<ul style="list-style-type: none"> <li>- Robot uses multiple sensors</li> <li>- Robot uses pre-programmed sequences in concert with sensors</li> <li>- Sensors add to repeatable navigation</li> <li>- Sensors add to precise navigation</li> </ul>
Programming	<ul style="list-style-type: none"> <li>- Programs are disorganized</li> <li>- Programs are inefficient</li> <li>- Results are unpredictable</li> <li>- Sensors are absent or inadequately used</li> <li>- Programs do not accomplish expected tasks</li> </ul>	<ul style="list-style-type: none"> <li>- Programs are somewhat disorganized</li> <li>- Programs are inefficient at completing tasks</li> <li>- Results are somewhat unpredictable</li> <li>- Programs do some of what is expected</li> </ul>	<ul style="list-style-type: none"> <li>- Programs are organized</li> <li>- Programs are efficient</li> <li>- Programs work most of the time</li> <li>- Sensors are used effectively</li> <li>- Programs do most of what they're expected to do</li> </ul>	<ul style="list-style-type: none"> <li>- Programs are logically organized</li> <li>- Programs are very efficient</li> <li>- Programs always work, even for complex tasks</li> <li>- Use of sensors guarantee certain actions in every trial</li> <li>- Programs work in competition the way they do in practice</li> <li>- Loops and conditions used effectively</li> <li>- Variables and subroutines used effectively</li> </ul>

	Needs Improvement	- Fair	- Good	- Excellent
Overall Design	<ul style="list-style-type: none"> <li>- Robot consists of base design from a book</li> </ul>	<ul style="list-style-type: none"> <li>- Robot is solid</li> <li>- Robot shows signs of team's design ideas</li> <li>- Sensors are not used to make the robot tolerant of variations</li> </ul>	<ul style="list-style-type: none"> <li>- Robot is solid (base and components)</li> <li>- Robot was designed by the team</li> <li>- Sensors are well-utilized</li> <li>- Manipulators don't reflect a consistent strategy</li> <li>-</li> </ul>	<ul style="list-style-type: none"> <li>- Robot is a complete system</li> <li>- Robot is consistent with team plan and strategy</li> <li>- All components work together</li> <li>- All components look like they belong together</li> <li>- Design is unique</li> <li>- Design demonstrates creative flair</li> </ul>
